**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 19, 22, 39-46, and 48-50 are rejected under 35 U.S.C. 102(e) as being anticipated by Boes et al. ('494).

3. The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

4. Boes et al. ('494) teach a modified carbon black in combination with a gel component that can be used as a liquid, gas or vapor adsorbent (col. 8, lines 6-8), comprising a carbon black having at least one organic group directly attached, wherein the organic group can be an aromatic group or a C1-C12 alkyl group, such as -COOH, a substituted sulfophenyl group, polysulfo phenyl group, or their salts. The aromatic group may be further substituted and the C1-C12 alkyl group can have an acidic group having a pKa of less than 11 (col. 4, lines 20-59). The carbon black may be pelletized and have increased water dispersibility (hydrophilic) (col. 5, lines 60-65). When more than one organic group is attached, they will be inherently attached to different portions of the carbon black. The method of adsorption by contacting an adsorbate with the adsorbent is an inherent characteristic of a material that is used in adsorption, and the carbon black material is inherently capable of adsorbing an adsorbate.

*Allowable Subject Matter*

5. Claim 51 is allowed.

6. The following is an examiner's statement of reasons for allowance: Reasons for allowance of claim 51 are given in the office action of paper no. 17.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

7. Claims 20, 21 and 23-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

*Response to Arguments*

8. Applicant's arguments filed March 17, 2003 have been fully considered but they are not persuasive. Applicant argues that the Boes et al. patent relates to a gel composition and teaches that the gel composition is the adsorbent, however it is submitted that the gel composition being referred to includes the modified carbonaceous material, which is inherently capable of adsorbing an adsorbate, as is known in the art and stated in the instant application.

9. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a carbonaceous material without a gel component) are not recited in the rejected claim(s).

Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). The claim language recites a modified carbonaceous material and contains no language that would exclude the presence of a gel component or any other material.

10. The examiner agrees with applicants' arguments that the rejection over WO'456 is improper because the reference does not qualify as prior art, and that the 35 USC 103 rejections have been overcome by a statement of common ownership. These rejections have been withdrawn. The 112 rejection of claim 40 and the objection of claim 49 have also been withdrawn.

*Conclusion*

11. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1724

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
